

PIONEER TOOL HOLDING SOLUTIONS

2020 CATALOG

Revised August, 2020

PIONEER DUAL CONTACT

What is Dual Contact

Dual Contact spindle gage line is ground to a controlled dimension to the taper of the spindle and tool holder. Standard spindles have a 0.078"/0.125" gap from the back of the tool holder flange to the spindle face. Dual contact reduces the gap to microns.

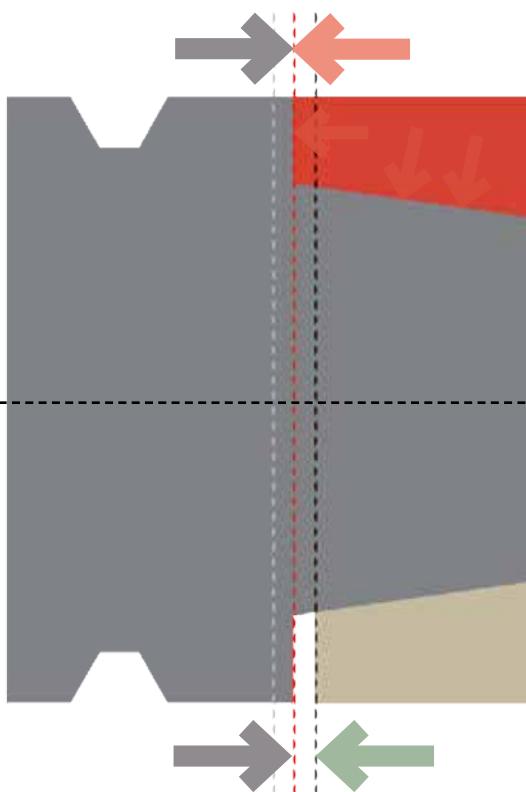

How is Dual Contact Effective

If enough side pressure (radial load) is applied to a milling tool it will cause the tool taper to disengage from the spindle, causing the tool to dog tail, effecting assembly runout and rigidity. Dual Contact uses the face of the spindle for additional support creating a higher displacement pressure point allowing the machine to operate at a higher radial load. The amount of pressure is dependent on the draw bar system in the machine. Lower draw bar pressure machines will see a greater improvement in side load applications than higher machines.

Dual Contact Holder

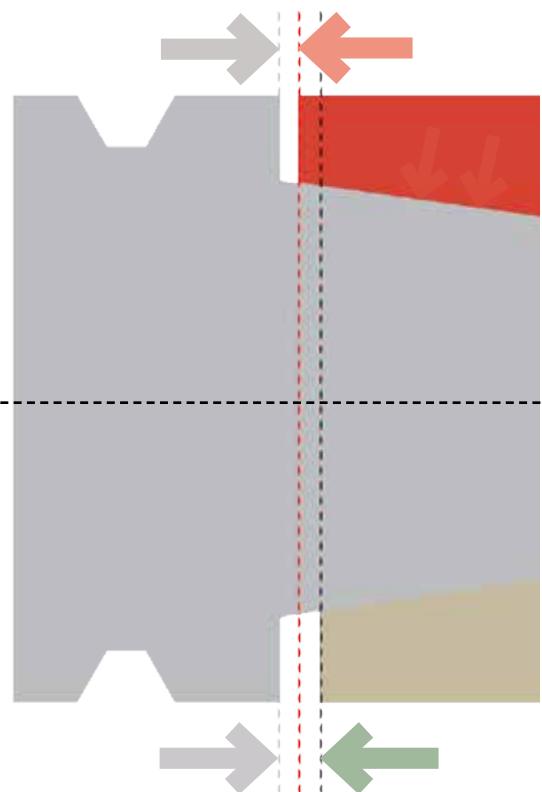

No Gap

Standard Holder

Small Gap

Dual Contact Spindle

Standard Spindle

Large Gap

Verify Machine Spindle warranty and Machine Tool manufacturers recommendation when using standard tooling in Dual Contact Spindles. Standard tooling can wear dual contact spindle tapers causing dual contact tooling to lock on the face before locking on the taper requiring a spindle repair to regain taper & face lockup. The reverse is also true, Dual Contact tooling used in standard spindles can wear the taper of the dual contact tool holder and cause lock up issues over time when used in dual contact spindles.

Balanced Tooling

In today's manufacturing balance is more important than ever. Spindle speeds are increasing, cutting tools are designed to run at greater RPM's.

Understanding balance is key to spindle and cutting tool life.

Any assembly running over 5,000 RPM will require some form of balance compensation. The higher the speed, the finer the balance requirement.

Causes of Unbalance

1. Flaws in the base material
2. Poor tolerances during fabrication
3. Out of roundness
4. Improper placement of through holes
5. Any machining performed on the tool holder that diminishes the absolute concentricity about the rotational axis contributes to unbalance
6. Asymmetrical tool holder design
7. Out of balance cutting tools (variable helix, variable pitch)
8. Deformation from over tightening retention knobs, coolant tube, screws or collet nuts.

Effective Balance

There is an understanding that needs to be corrected in the industry. If I purchased balanced holders my "tools" are balanced. Machine tool companies state in warranties the "tooling" must be balanced. Tooling referring to the assembly not just 1 piece. Consider a wheel on your automobile. The tool holder is the rim, the cutting tool is the tire. When you purchase tires they always balance the wheel once the tire is assembled and you have to re-balance as the tire wears. The same is true for tooling.

If I balance only the holder then add the weight of the accessories need to use that tool holder, most likely my center of gravity has moved and I am no longer in balance. Anyone who has been around balancing machines knows that any change in weight usually takes the assembly out of balance. Remember we are talking about measuring grams per mm, a very small amount can affect a tool at 15,000 RPM.

Consider the other argument, I take my balanced tooling then put the cutter into a side load with cutting forces against 1 side of the cutting tool, am I still balanced? The machine spindle warranty requires fine balance but the application creates an unbalanced condition. How critical is the fine balance?

Cutting Tool Geometry

Consider variable pitch / variable helix cutting tools. They create less vibration and better finish because the design is not symmetrical, 1 flute thicker than the others. If it is not symmetrical is it balanced? If yes what is the certified balance grade and RPM?

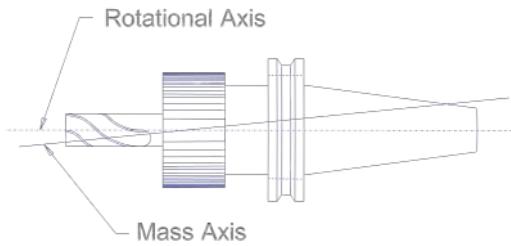

We know that balancing all individual components for a higher than required speed does not mean the assembly will be balanced. There are still tolerances and weight distribution issues to consider.

The center of gravity

Tool holder manufacturers cannot pre-balance collet chucks for example and guarantee results due to the unknown size, length and preset projection of the cutting tool. If I pre-balance for a 1/2" solid carbide end mill x 4" and a 6" is used, the weight has increased and also the distance that weight was placed from the face of the chuck moving the center of gravity. What if I pre-balance for 1/2" and a 1/8" is used? 1" is used? This is why it is impossible for any tool holder company to guarantee balance unless the tool is assembled and balanced prior to usage.

Balance Correction

Once we assemble our “balanced” components depending on the weight and length of the components there is a shift in the Mass Axis of the holder. To correct any movement or error we need to determine how much correction is required.

Balance Calculations

The industry uses ANSI S2.19-1989 balancing grade system to determine the “G” rating to use for machine spindles and tooling.

To make this correction you need to know the following:

- U = Maximum allowable unbalance in gr-mm
- W = Total weight of the assembly in kilograms (kg)
- G = Required “G” rating
- RPM = The operating speed for this assembly

Applied with a 9549 constant you use the following formula to calculate your allowable unbalance.

$$U = (G \times 9549 \times W) / RPM$$

Calculation of “G” 2.5 for a #40 Taper ER16 Assembly with a weight of 2.75 lbs (1.247 kg) at 8,000 and 20,000 rpm a general expression for G2.5 works out to the following:

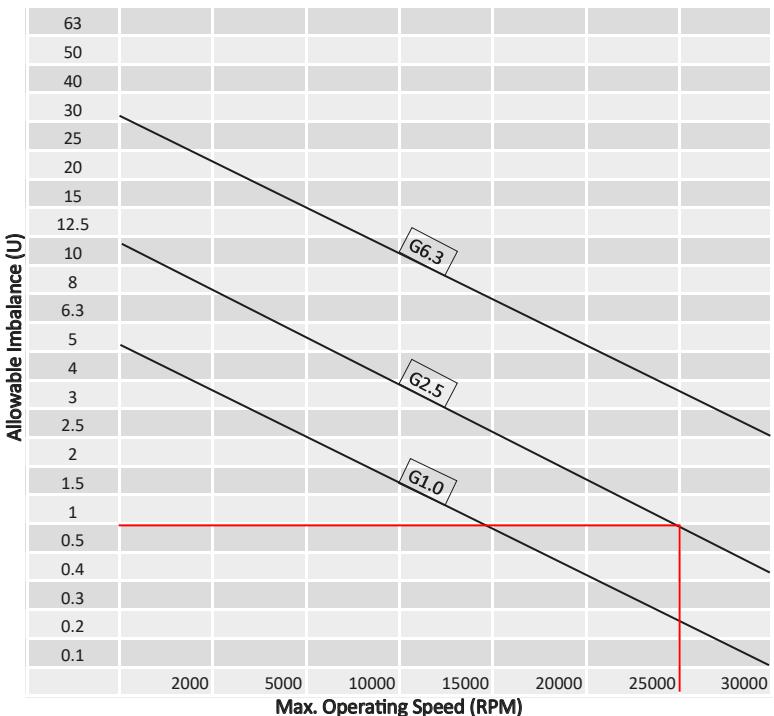

$$U = (2.5 \times 9549 \times 1.247) / RPM$$

Solving these expressions for 8,000 rpm and 20,000 rpm range shows:

Unbalance for G 2.5 at 8,000 rpm = 3.72 gr-mm

Unbalance for G 2.5 at 20,000 rpm = 1.49 gr-mm

If our assembly checks within the gr-mm for the operating RPM no correction is required.

Balance Machine Limits

An issue that presents in modern manufacturing today is the balance requirements compared to the balance machine limits. Balancing machines today have a sensitivity of +/- 0.5 gr-mm or total of 1 gr-mm. This means the total assembly weight must be high enough for the machine to sense to allow accurate balance of the assembly or in other words, the machine cannot guarantee results under 1 gr-mm.

In the chart below we show how the lighter weight assemblies can only be certified to certain RPM's due to the available limits of the balancing machine. This is also why it is important on light tooling like HSK32E, BT30, etc... are balanced as an assembly for high speed applications. If the cutting tool is not present the weight is reduced causing a lower than desired actual balance.

The balancing machine manufactures who sell tool holders state “balanced to G2.5 @ 25,000 RPM or >= 1 gr-mm” on their holder products.

gr-mm by Holder Weight & Application RPM (U) (numbers in red are outside the balance machine limits)

BC Mill Chuck Premium Performance

- 0.0002" TIR Guaranteed @ 50mm (2")
- Eliminating wear components & easy to clean
- Solid Shoulder Design prevents over tightening
- Smaller OD than Traditional Mill Chucks
- Sealed bore design for high pressure applications
- Over 400 ft/lbs of radial torque on 1.25" Carbide Shanks
- Unlike materials & mass dampen cutting harmonics
- Designed for Performance Milling with Neutral to 30° flute geometry, not designed for hi-helix applications
- Tapers are ground better than AT3 for optimal T.I.R.

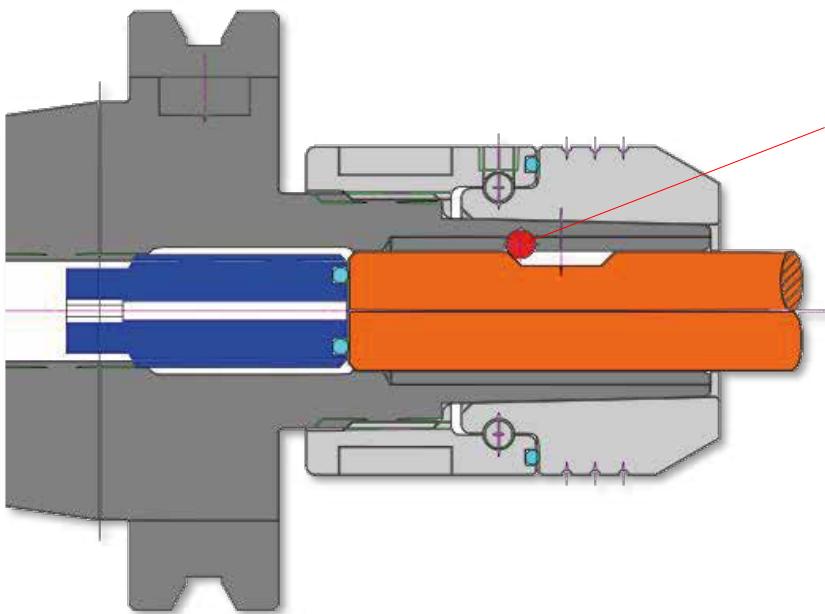

Bearingless Mill Chuck Design Features

Non Pull Out

For Volume & High Feed Milling

The NP Milling System provides a cost effective solution to prevent cutter pull out. Designed to work with any standard Weldon flat, the system can be adapted to other flat styles and radial grooves.

Pioneer modifies a standard BC Mill Chuck by EDM, allowing for quick delivery and special configurations in under a week.

The result is a 100% Non-Pull out holder with all the vibration dampening of a Mill Chuck for improved cutter performance.

Combined with the BC Chucks vibration dampening and you have a cost effective performance combination.

How to assemble Non-Pull Out

Insert the End mill, orientate the flat to the cross hole

Insert the Hardened Dowel Pin

Grease Taper & Assemble the Lock Nut, Hand Tight

Adjust and Tighten the Preset Screw until tight against the Dowel Pin

Tighten the Lock Nut in a Locking Fixture

BT30 & BT40 Bearing-less Mill Chucks

Features

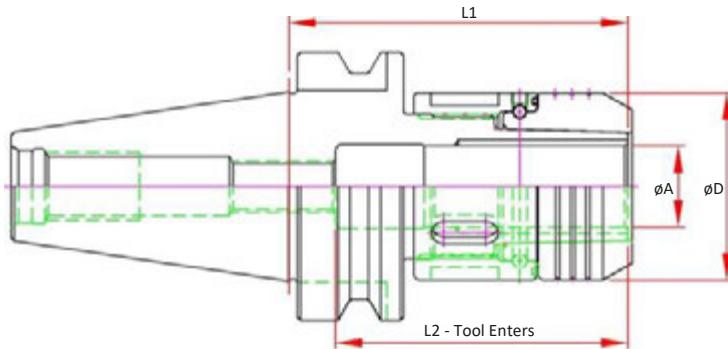

- 5 μm - 0.0002" Runout @ 2 x Cutter Shank Dia.
- Works in both Standard and Dual Contact Spindles
- Designed for Tool Shanks w/ ISO h6 Class Tolerance
- Tapers are ground better than AT3 for optimal T.I.R.
- Sealed by Design for High Pressure Coolant
- Balanced for use @ 20,000 RPM

Optional (Order Separately):

- Torque Wrench
- Nylon Screw Seal for short tool shanks
- DIN-B Flange Coolant
- Jet-Blast Coolant Ports (for Solid Tooling)
- Fine Trim Balance
(Sample cutter required for balance compensation)
- For Non-Pull Out add –NP to the part number

Note: BC Holders do "work in". Meaning the first couple of uses will require additional tightening torque.

BC Setup and Tightening Information

Remove the lock nut from the BC holder assembly, wipe off any dirt or existing grease from taper and inside the lock nut.

Apply grease to taper.

Re-Assemble lock nut.

Body protruding approx. 1mm (0.040") from the lock nut at full torque.
Tighten lock nut until it stops or approx. 1mm (0.040") of the chuck body protrudes out from the face of the lock nut with a torque wrench set to specified settings, see chart.

MX & VX 3 Micron Chuck

Clamping Range : 0.125" - 0.500"

ISO h6 Tool Shanks Required

Simply the Best Finish & Tool Life in a Cost Effective Milling System

Hands Down Winner in any Finish Milling Application!

Designed for Finish Milling

Once you pre-load the collet into the VX holder, repeatability is less than 0.0001" Tool to Tool due to the cross pin design which prevents twisting on the collet while tightening.

When you "have to" use Extensions

No one wants to use extensions but when you have to, use an extension that has the Best TIR in the industry.

Guaranteed 3µm @ 4D, no extension runs better.

Coolant Thru for High Pressure with a Jet-Blast option for solid tools.

Reduced Harmonic Design

Unlike materials, taper nose and draw bar design provide superior vibration dampening over Slim Nose Shrink holders and extensions.

Compact Design

The MX and VX system are compact to provide maximum nose clearance for hard to reach applications.

We have redesigned the nose ends for additional clearance:

VX06 = 0.500 (Previously 0.625)
VX08 = 0.787 (Previously 0.870)
VX12 = 1.000 (Previously 1.180)

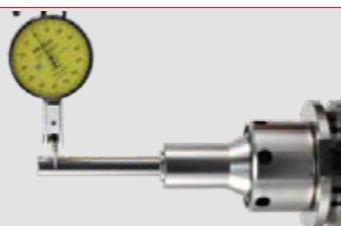

Unbeatable T.I.R. - 3µm @ 4D or better!

Collet TIR

Collet Class	Max. TIR
MX	0.00012" @ 4D

Coolant Thru for High Pressure or Jet-Blast

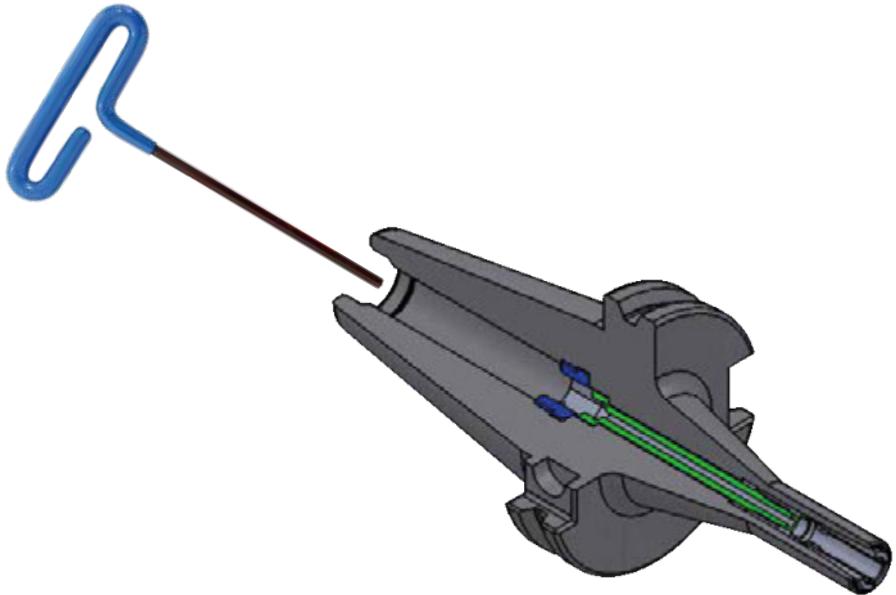

Collets are sealed by design for high pressure coolant or air. Jet-Blast is available for coolant around solid tools.

How MX Works

Coolant thru center draw bolt accessed from the retention knob end of the holder draws the collet into the pocket and tightens the collet. Please note the retention knob must have a 6mm or larger coolant hole for the 5mm wrench to clear or the knob will have to be removed to change cutting tools.

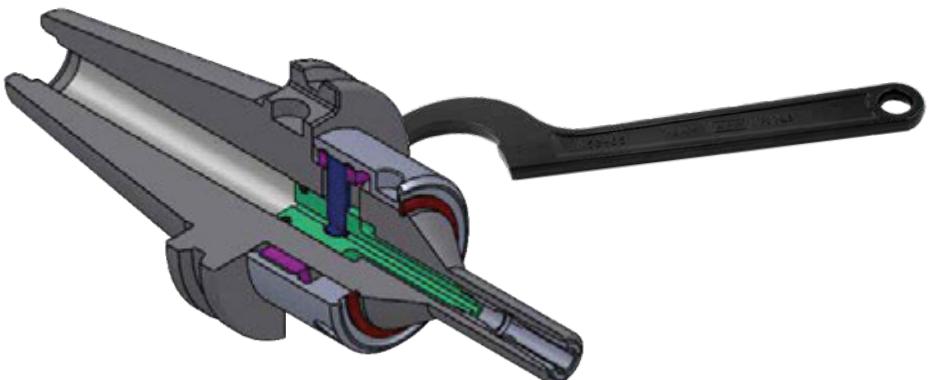

Design uses a T-Handle Hex wrench to tighten which limits the maximum gripping force, MX is designed for finishing only.

How VX Works

VX is a front locking collar design utilizing a pin spanner wrench to tighten. This allows for increased locking pressure over MX up to 5X the holding power.

The front locking mechanism requires the collet to be threaded into the holder before the collar can be locked.

CAT & DCAT VX Mini Chuck

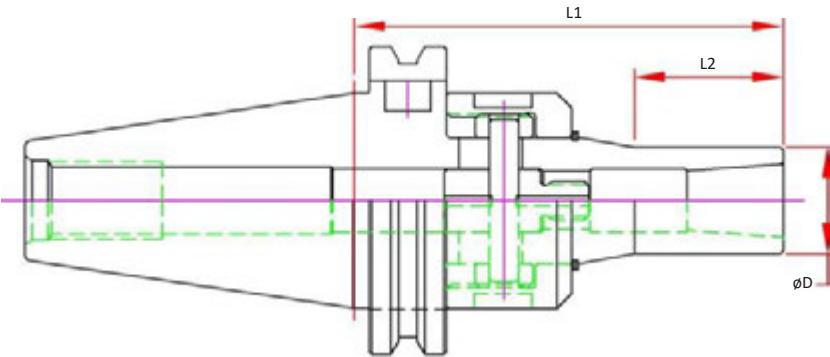

Features

- 3 μm - 0.0001" Runout @ 4X Diameter
- Front Locking System
- Coolant Thru
- Dynamically Pre-Balanced G2.5 @ 25,000 RPM or < 1gmm
- Tapers are ground better than AT3 for optimal T.I.R.

Optional (Order Separately):

- Wrench
- Torque Wrench
- Collets, STD and Jet-Blast
- DIN-B Flange Coolant
- Fine Trim Balance
(Sample cutter required for balance compensation)

VX Assembly & Tightening Instructions

The instructions below are a basic procedure. Always use proper safety equipment when working with any machine tool component.

Turn locking collar counter-clockwise until it stops.

Insert collet and turn clockwise.
Use Flat Screw Driver if required.

Turn collet until it stops or reaches 1/8" from the face of the chuck. Assemble loose,
Do not tighten!
Thread gap is required for proper function.

Insert cutter, while holding the cutter handle tighten the locking collar clockwise until the collet holds the tool.

Tighten locking collar to 30 ft/lbs Maximum
Do not over tighten or tool can jam or cause excessive TIR!

MX Jet-Blast Collets

Features

- 3µm - 0.0001" Runout @ 4X Diameter
- Jet-Blast for Coolant Around Solid Tools
- Fits MX & VX Collet Chucks
- Designed for h6 tolerance cutting tools
- Coolant ports are 2 ports
Additional holes can be added as an up charge
- To Order, add **-J** to the end of the MX Collet number

1/2 Moon Jet-Blast, only used
when collet wall is too thin for full
diameter Jet-Blast holes.

MX Collet Sets

Features

- 3 µm - 0.0001" or Better
- Includes Collet Tray

Note: Collet Tray includes positions for Inch and Metric collets, will not be filled unless all sizes are ordered

Part Number	Collet Size	Pieces	Includes
MX06-MSET-7	MX06	7	3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0
MX06-ISET-5	MX06	5	1/8, 5/32, 3/16, 7/32, 1/4
MX08-MSET-8	MX08	8	3.0, 4.0, 5.0, 6.0, 7.0, 8.0, 9.0, 10.0
MX08-ISET-6	MX08	6	1/8, 5/32, 3/16, 1/4, 5/16, 3/8
MX12-MSET-7	MX12	7	3.0, 4.0, 5.0, 6.0, 8.0, 10.0, 12.0
MX12-ISET-7	MX12	7	1/8, 3/16, 1/4, 5/16, 3/8, 7/16, 1/2

MX Collet Trays

Features

- Collet Tray includes positions for Inch and Metric collets.
- Steel Construction with Sizes Laser marked

Part Number	Amount of Collets
MX06 TRAY	14
MX08 TRAY	14
MX12 TRAY	14

Smaller Nose for Tight Applications

SX holders are designed to provide additional clearance for close wall applications.

The SX25M has been re-designed to provide additional clearance. SX25M provides the same clearance as ER32 but with a tool capacity up to 1".

Holder	Max. Cutting Tool	Nose Ø
SX06	0.250" (6mm)	0.77"
SX06M	0.250" (6mm)	0.63"
SX10	0.375" (10mm)	1.08"
SX10M	0.375" (10mm)	0.87"
SX16	0.625" (16mm)	1.58"
SX25M	1.000" (25mm)	1.97"

Reduced Harmonic Design

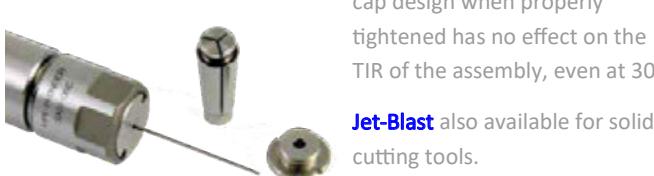

When gage-lines are aligned, SX16 sits deeper in the chuck with less overhang and more shank support than ER32.

The Flat Locking Surface eliminates any influence from the locking nut for consistency on every tool change.

High Pressure Coolant Caps

SX Coolant Caps supply up to 1,000 psi coolant seal. The threaded cap design when properly tightened has no effect on the TIR of the assembly, even at 30D!

Jet-Blast also available for solid cutting tools.

SX-P 3 Micron Chuck

Clamping Range : 0.031" - 1.000"

Collet Range : 0.020" (0.5mm)

Ultimate Precision Collet Chuck Designed for Drilling & Finish Milling

For the best tool life and superior finish.

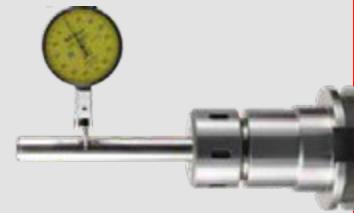

T.I.R. - 3µm @ 4D, Second to None!

- All SX-P Collets are hand inspected and checked 3 times for guaranteed performance
- Standard 5µm Grade Available
- Inch & Metric Sizes

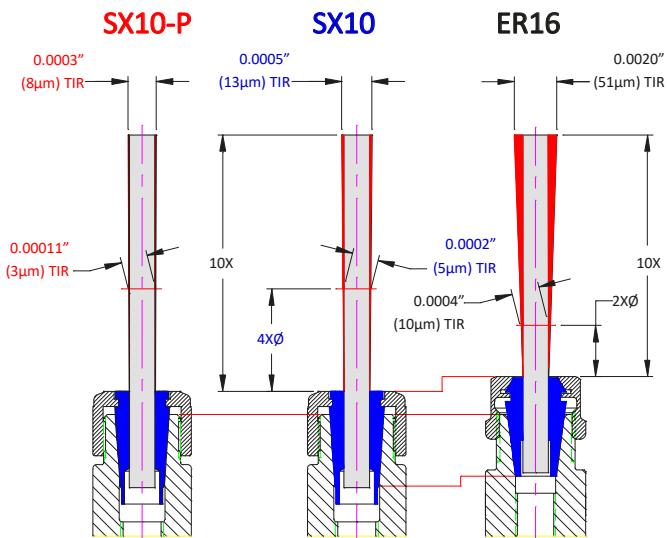

Collet TIR

Collet Class	Max. TIR
SX	0.00020" @ 4D
SX-P	0.00012" @ 4D

3 Micron Provides Results

Shown below a 1/4" at 10X. Worst Case Runout Shown with each collet at maximum TIR.

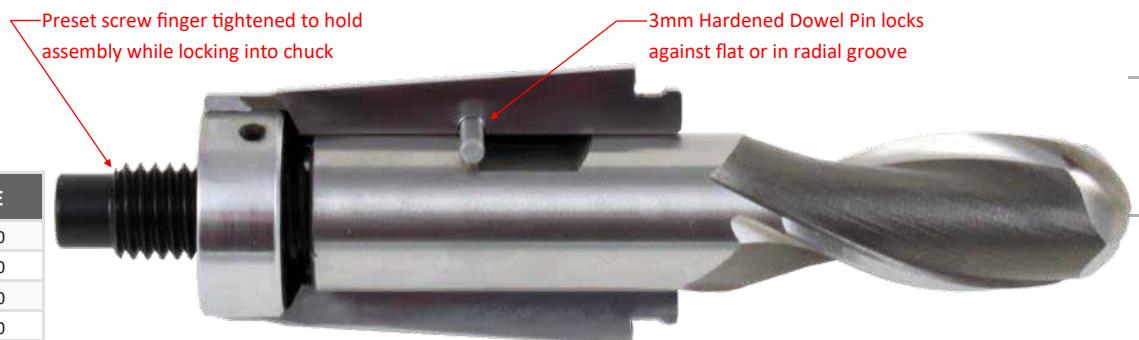

SX25 Non-Pull Out Collets

For Hi-Feed Milling Applications

Non Pull out collets are developed for hi-feed titanium and aluminum applications with a cutter helix of 45° or greater to prevent cutter pull out.

The Pioneer design utilizes a standard hardened 62Rc 3mm dowel pin to provide contact across the flat and superior sheer strength. The preset screw is used to hold the cutter in position, preventing any movement while being locked into the tool holder.

The modification is performed at our location in Chicago, the pin location can be adjusted to fit any flat or groove position within the collet bore behind the nut. Special configurations available upon request.

PART NUMBER	BORE
SX25-0375NP	0.3750
SX25-0500NP	0.5000
SX25-0625NP	0.6250
SX25-0750NP	0.7500
SX25-0875NP	0.8750
SX25-M120NP	12MM
SX25-M160NP	16MM
SX25-M200NP	20MM

SX25 Non-Pull Out Assembly - How does it work!

Insert SX25-NP Collet into the SXN25M Nut

Insert cutting tool into the collet, cutter flat orientation to the pin hole as shown

Use safety gloves if required

Fully insert cutter into the collet

Insert Pin into the Pin Hole
Note: if cutting tool flat is not in the correct orientation the pin will not insert, rotate cutter if needed to align the pin to the flat

Once the pin is fully inserted pull out on the cutting tool so the back of the flat is tight against the pin
Use safety gloves if required

Insert the preset screw finger tight against the back of the cutting tool to hold the cutter in place and eliminate gap and movement

Assemble into the collet chuck, torque to 85 ft/lbs, you are ready to go!

SX Mini Collet Chuck Extensions

Features

- 3 μm - 0.0001" Runout Taper to Taper
- Coolant Thru Body

Optional (Order Separately):

- Wrench
- Torque Wrench
- Collets
 - 0.005mm (0.0002") Standard
 - 0.003mm (0.0001") Ultra Precision
 - Sealed (Select Sizes)
 - Jet-Blast (Select Sizes)

SX Collet Assembly Instructions

Set the small end of the collet remover on the taper

Push down on the collet remover until the slots collapse

Flip the collet over on the tail end

Set the collet nut on the collet

Push down on the collet remover, the collet will expand into the nut

SX Collet Assembly Tool

- Tool is required for assembly and removal of the SX collets from the nut.

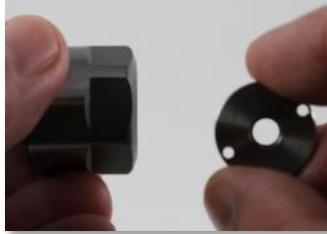

NUT SERIES	PART NUMBER
SXN-06H & M	SXR-06
SXN-10H	SXR-10
SXN-10M	SXR-10M
SXN-16S	SXR-16
SXN-25S	SXR-25

SX Coolant Cap System

Seals Collet Chucks for Air/Coolant Thru applications and prevents dirt, chips & swarf from entering the slots of the collet.

What do you need?

- 1 SX Collet Chuck
- 1 SX Collet
- 1 SX Coolant Cap Nut
- 1 SX Coolant Cap

Thread Coolant Cap into SX nut, do not tighten, assemble the collet.

Insert cutting tool with the seal engaged on the round part of the shank, tighten cap.

SX Coolant Cap Nuts

Coolant Nut Part Number	Description	Type	Nut Wrench Part Number	Thread	Coolant Cap Wrench	Tightening Torque
SXCN-06	SX06 Coolant Cap Nut	Hex	SXW-06	M15.5 X 1.0	SXW-CC	22 ft/lbs
SXCN-10	SX10 Coolant Cap Nut	Hex	SXW-10	M21.5 X 1.0		41 ft/lbs
SXCN-16	SX16 Coolant Cap Nut	Spanner	SXW-16	M32 X 1.5		55 ft/lbs
SXCN-25	SX25 Coolant Cap Nut	Spanner	50-55 HOOK	M45 X 1.5		85 ft/lbs

SX Coolant Caps - Inch

Features

- O-ring seal for pressures up to 1500 PSI
- Prevents chips, dust & swarf from entering the holder
- Requires Coolant Cap Nut (See Above)
- Jet Blast for Non-Coolant Cutting Tools Available
 - Order by adding a "J" to the end of the part number

SX25 Collets

Features

- **5µm - 0.0002"** T.I.R. @ 4X tool diameter
3µm - 0.0001" T.I.R. @ 4X tool diameter—Add "P" to the collet part number
(Hand Inspected from Inventory)
- Flat ground shoulder guarantees the collet to be seated correctly for optimal repeatability.
- **Up to 0.020" (0.5mm) Collapse Range** 3mm (1/8, 0.1250") & Larger
P Collets for use ON-Size

Highest Quality - Designed to Last

PIONEER Shrink Fit is manufactured from ISO-40CrMoV5 Tool Steel, Double Tempered at 1050°F to withstand up to 10,000 tool changes.

All holders are 100% inspected on Air/Electronic gaging and the ID is ground for a maximum of 3 microns (0.0001") Runout (TIR) in the Bore.

Dynamically Balanced

PIONEER Tapered Shrink Fit Holders are Dynamically Balanced for G2.5 @ 25,000 RPM or < 1 gmm's

Premium Shrink Fit Performance

- * 0.0001" TIR Guaranteed @ Bore
- * Manufactured from ISO-40CrMoV5 (H13) Material, Heat Treated for Optimum Elasticity and Tool Life
- * Tolerance and Ground for as close to 10,000 lbs of pull out force or higher (cutter shank finish may effect results)
- * Designed for Performance Milling with Neutral flute geometry, not designed for hi-helix applications
For Carbide Cutting Tools with h6 shank tolerance
- * Dynamically Balanced for G2.5 @ 25,000 RPM or < 1 gmm's
- Tapers are ground better than AT3 for optimal T.I.R.

Jet-Blast Options to fit YOUR Application

We at Pioneer have invested in an EDM Drilling machine which allow us to customize Jet-Blast coolant holes to your application.

Every Jet-Blast Holder or collet comes with 2 ports standard. Depending on style and type we have the ability of adding as many holes as your coolant volume can support without losing pressure.

2 - Port Jet-Blast Same tool shot with
a High Speed Shutter

Any standard Shrink can be modified from stock. Adding a "J" to the end of the part number will provide you with 2 coolant ports. Need additional ports? Add "J 6-Port" to the part number for additional 4 ports (additional fees will apply).

EZ Shrink Pack

Complete Shrink Fit Heating & Water Cooling System

What's Included in the Package:

EZ Shrink Unit

- * #EZ-SHRINK-EZ3K
- * 1/8-3/4 Capacity
(1-1/4 with Optional Coil)
- * 220V, 20A Single Phase Power
- * 3kw Output
- * For tools with up to a 12.50 Projection
- * 1 Year Limited Warranty
- * **30 Second Cycle Time**

EZ Cooling Unit

- * #EZ-COOL-EZ3W-KIT
- * Water Cooling with Shop Coolant (Water Based)
- * Separate Cooling, cool 1st tool while heating the 2nd
- * 110V, 16A
- * 1 Year Limited Warranty
- * **30 Second Cycle Time**

(2) EZ-Base
Tool Holder Base

EZ-COOL-EXT
Cooling Extension

EZ-GLOVE
Safety Gloves

EZ-ROUND-TRAY
Cutter Storage Tray

(5) Shrink Fit Holders

Pick any 5 standard length holders listed on the back page.

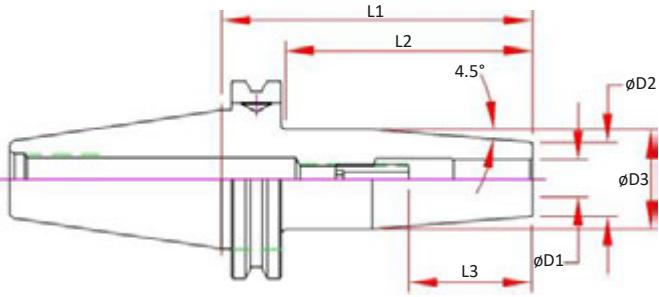

*Optional 1-1/4 Heating Coil
EZ-SHRINK-EZ3K COIL 32MM
Required for 1" and 1-1/4" Holders

CAT40 Shrink Fit - Inch

Features

- 3 μm - 0.0001" Runout Taper to Bore
- Manufactured from ISO-40CrMoV5 (H13) Material, Heat Treated for Optimum Elasticity and Tool Life
- Coolant Thru the Center
- Tapers are ground better than AT3 for optimal T.I.R.
- Dynamically Balanced for G2.5 @ 25,000 RPM or < 1 gmm
- Preset Screw included for 1/4" & larger for positive stop
- Designed for Carbide Cutting Tools with h6 shank tolerance

Optional (Order Separately):

- Jet-Blast Coolant Ports - Add "-J"
- DIN-B Coolant - Add "-D"
- Fine Trim Balance (Sample cutter required for balance compensation)

HSK063A Shrink Fit - Metric

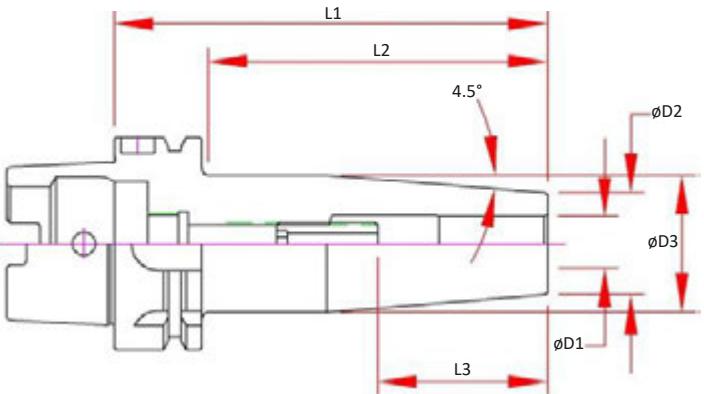

Features

- 3 μm - 0.0001" Runout Taper to Bore
- Manufactured from ISO-40CrMoV5 (H13) Material, Heat Treated for Optimum Elasticity and Tool Life
- Coolant Thru the Center
- Dynamically Balanced for G2.5 @ 25,000 RPM or < 1 gmm
- Preset Screw included for 1/4" & larger for positive stop
- Designed for Carbide Cutting Tools with h6 shank tolerance

Optional (Order Separately):

- Jet-Blast Coolant Ports - Add "J"
- Fine Trim Balance (Sample cutter required for balance compensation)

Note: 120mm, 130mm & 200mm in normally in stock in Germany

SD - Shrink Fit Extensions - Inch

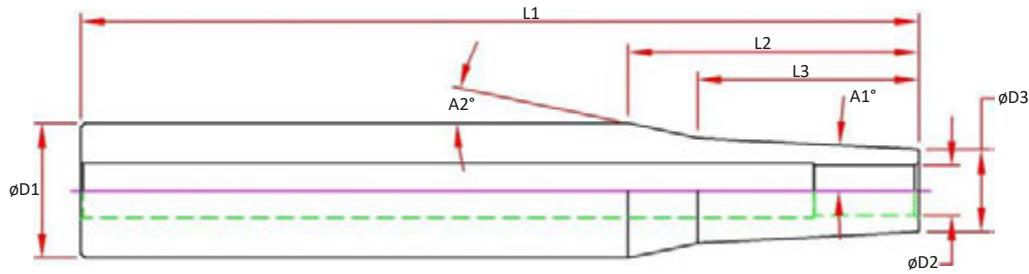

Features:

- 3 μm - 0.0001" Runout
- Coolant Thru the Center
- Close Center to clear fixtures or part walls
- Manufactured from ISO-40CrMoV5 (H13) Material, Heat Treated for Optimum Elasticity and Tool Life
- Designed for Carbide Cutting Tools with h6 shank tolerance

Optional (Order Separately):

- Jet-Blast Coolant Ports - Add "J"

Note: Due to the thin wall Jet-Blast Ports may be into the bore of the extension.

EZ-SHRINK-EZ3K-KIT

3kw, 1/8-3/4 Capacity, 220V, 20A Single Phase

User adjustable settings.

Includes:

- EZ Shrink Machine
- Optional 32mm Coil for tooling up to 1-1/4"
- (2) Bases
- (1) Cutting Tool Tray
- (1) Pair of Gloves
- 12"W x 17.5"D x 31"H

•Max tool projection over cutter is 12.5" from holder gage line with base installed , base height is 6.5".

EZ-COOL-EZ3W-KIT

2 Station, 110V, 16A

Includes:

- EZ Cooling Machine
- (1) Hose Kit
- (1) Cooling Adapter
- 16.5"W x 21.88"D x 23"H
- Coolant Tank Capacity = 5 Gallons
- Anti-Rust additive recommended

Part Number	Includes
EZ-SHRINK-EZ3K	Machine Only
EZ-SHRINK-EZ3K-KIT-40	Machine, (2) Base-T40, Gloves, Tool Tray
EZ-SHRINK-EZ3K-KIT-50	Machine, (2) Base-T50, Gloves, Tool Tray
EZ-SHRINK-EZ3K-KIT-63A	Machine, (2) Base-HSK63A, Gloves, Tool Tray
EZ-SHRINK-EZ3K-KIT-100A	Machine, (2) Base-HSK100A, Gloves, Tool Tray

Part Number	Includes
EZ-COOL-EZ3W	Unit Only
EZ-COOL-EZ3W-KIT	Base, Adapter & Hose
EZ-COOL-ADAPTER	Cooling Adapter to fit Base
EZ-COOL-HOSE	Hose & 2 Hose Clamps

Proper cooling is the key to preventing over heating of the tool holders and long life of the H13 tool steel. EZ Cool units uses your shop coolant to returns the holder to a safe to handle temperature in 30 seconds.

EZ Shrink Machine is a 3kw, 30 second unit that functions with 1/8-3/4 (3mm-20mm) cutter shanks (carbide only). Pre-programmed and user adjustable EZ Shrink is simple and effective.

EZ-BASE

Tapered Shank Bases
For use with EZ3K & EZ3W
Base Height = 6.5"

Part Number	Shank Size
EZ-BASE-T30	BT30, CAT30, ISO30, SK30
EZ-BASE-T40	BT40, CAT40, ISO40, SK40
EZ-BASE-T50	BT50, CAT50, ISO50, SK50
EZ-BASE-HSK032A	HSK32A, C & E
EZ-BASE-HSK040A	HSK40A, C, E, HSK50F
EZ-BASE-HSK050A	HSK50A, C, E, HSK63F
EZ-BASE-HSK063A	HSK63A, C, E, HSK80F
EZ-BASE-HSK100A	HSK100A, C, E

EZ-BASE-S

Straight Shank Adapters
*EZ-ROUND-TRAY is required to locate any EZ-BASE-S*** (Order Separately)*

Part Number	Shank Size
EZ-BASE-S037	3/8"
EZ-BASE-S050	1/2"
EZ-BASE-S075	3/4"
EZ-BASE-S100	1"
EZ-BASE-S10	10mm
EZ-BASE-S12	12mm
EZ-BASE-S16	16mm
EZ-BASE-S20	20mm
EZ-BASE-S25	25mm
EZ-BASE-S32	32mm

EZ-COOL-EXT

Spacer to increase height for extended length holders in the EZ-COOL-EZ3W

Part Number	Description
EZ-COOL-EXT	Extension for Longer Tools

EZ-ROUND-TRAY

For storage of the cutting tools

Part Number	Description
EZ-ROUND-TRAY	Cutting Tool Holder

EZ-GLOVE

Safety Gloves

Part Number	Description
EZ-GLOVE	Protective Gloves

EZ3K-32MM-COIL

Increases Capacity to 32mm (1-1/4")
For 1/2"-1/1/4 Tool Shanks

See manual for installation and programming

Part Number	Description
EZ-SHRINK-EZ3 COIL 32MM	12MM-32MM Expansion Coil

EZ-TABLE

- Dimensions: 48" W x 24" D x 39" H
- Polyurethane coated solid wooden top (48" x 24" x 1.5" thick)
- 2 solid steel drawers with ball bearing sliders; 4 wheels (2 locking)
- Steel frame in graphite finish

Part Number	Size
EZ-TABLE	48" W x 24" D x 39" H

PIONEER

MC Mill Chuck—Best in Class

- 0.0002" TIR Guaranteed @ 4D or up to 100mm
- 5X the driving torque than ER on nominal sizes, over 600 ft/lbs of radial torque on 1.25" Carbide shanks
- 20% Higher grip force than competitive models
- Unlike materials & bearings & mass dampen cutting harmonics
- Designed for Performance Milling with Neutral flute geometry, not designed for hi-helix applications
- Reducing sleeves down to 1/8"

Note: Using reducing sleeves also reduces holding power by 6X

Ultra-low Temperature Treatment

Sub-zero temperature treatment at -100°C to remove the residual austenite from the holder which provides increased durability and long lasting performance.

Ultimate Precision 0.0002" @ 100mm

Runout at the end of the 1-1/4" tool 4" from the chuck face is within 0.0002" TIR, that is 8" from the spindle!

Coolant Cap Sealing System for MC Collets

Pioneer Coolant Cap Seals create a positive seal against the face of the Mill Chuck body and the shank of the cutting tool. The system utilizes a standard MC collet, a coolant cap that matches the collet ID, and a coolant cap nut.

- **Low Cost** - Uses standard MC collets
- **Replaceable Seals** - Utilizes standard O-rings for easy low cost replacement
- Works with all MC Collets, **will not fit BC Mill Chucks**.

MC Coolant Cap

- Works with all MC Collets, **will not fit BC Mill Chucks**
- Requires (1) MCN Nut and (1) MCC Cap
- Order Cap to match MC Collet ID Size

Nut Part Number	Collet Size	Cap Part Number	Available Sizes
MCN075	MC075	MCC075-	1/8, 3/16, 1/4, 5/16, 3/8, 7/16, 1/2, 9/16, 5/8

CAT40 Mill Chucks

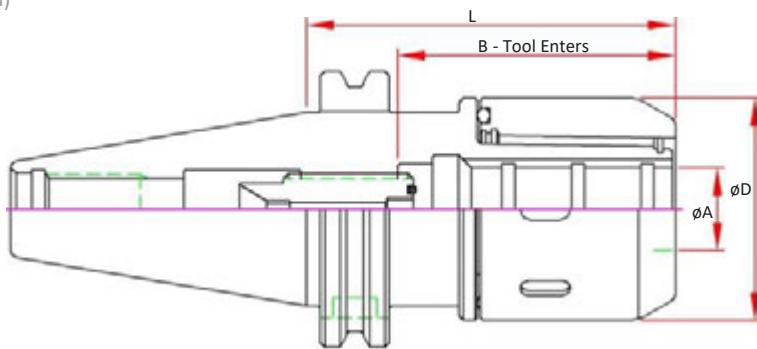

Features

- 5 μm - 0.0002" Runout @ 4 x Cutter Shank Dia.
- Designed for Tool Shanks w/ ISO h6 Class Tolerance
- Pre-Balanced for use @ 20,000 RPM
- Tapers are ground better than AT3 for optimal T.I.R.

Optional (Order Separately):

- Wrench
- Nylon Screw Seal for short tool shanks
- DIN-B Flange Coolant
- Fine Trim Balance
(Sample cutter required for balance compensation)

Mill Chuck Operation

1. Cutting tools must have an ISO shank tolerance of h6 (0 / -0.0005").
2. It is strongly recommended that the cutting tools have a straight cylindrical shanks to optimize performance. Reducing sleeves (collets) should not be used if possible because holding power is reduced 2-6X using reducing sleeves. Mill Chucks are designed for direct drive without a reducing sleeve (collet). For best performance keep flats on the cutting tools to a minimum.
3. Clean the ID of the Chuck, ID and OD of the Collet and the OD of the tool shank
4. Firmly hold the mill chuck with a tool fixture. Insert the collet or cutter shank into the ID of the MC Chuck, for proper holding the round part of the cutting shank must engage the complete bore depth. When using reducing sleeves (collets) verify the round portion of the cutting tool shank enters the complete length of the collet bore.
5. Tighten the nut using the proper wrench. Tighten the nut all the way down until the O-ring located at the bottom of the nut touches the flange of the body.
Note: The nut hitting the shoulder will cause additional TIR. See Step 6.
6. Back off 1/8 - 1/4 turn for semi-finishing and finishing applications, TIR is restored the holder is back to where it was ground.
7. DO NOT tighten the mill chuck without a cutting tool shank inserted. This may cause damage to the mill chuck, or loss of performance.
8. DO NOT tighten past the O-ring touching the body. Over tightening does not increase pressure and damages the bearings in the nut.
9. When changing tools and storing mill chucks it is important to loosen the mill chuck nut completely and disengage the nut until is spins freely. This allows the bearing to return to the home position.
10. If there is noticeable corrosion or wear on the mill chuck ID, taper of the shank, or excessive unsmooth feeling when tightening or loosening the mill chuck nut, please stop using the mill chuck and contact your local service center.

Due to the tolerance variance of the cutter shanks and pressure required a tightening torque value is not supplied.

The procedure above if followed will allow the holder to operate for many years without issue.

MC - Milling Chuck Collets

MC Collets are Straight Sleeves that allow you to expand the capabilities of your Mill Chuck.

- Collets Ground 3µm - 0.0001" Runout OD to ID
- Interchangeable with most competitive models
- On Size
- Designed for h6 tolerance cutting tool shanks

Note: Mill Chuck Collets reduce the grip force of the Mill Chuck.

Use caution to prevent cutter slip / pull out.

Collet Sets

MC Collets are Straight Sleeves that allow you to expand the capabilities of your Mill Chuck.

- Interchangeable with most competitive models
- Designed for h6 tolerance cutting tool shanks
- Collet Tray Included

Part Number	Collet Size	Pieces	Includes
MC075-ISET	MC075	9	1/8, 3/16, 1/4, 5/16, 3/8, 7/16, 1/2, 9/16, 5/8
MC100-ISET	MC100	11	1/8, 3/16, 1/4, 5/16, 3/8, 7/16, 1/2, 9/16, 5/8, 3/4, 7/8
MC125-ISET	MC125	12	1/8, 3/16, 1/4, 5/16, 3/8, 7/16, 1/2, 9/16, 5/8, 3/4, 7/8, 1"

Preset Screws

- Nylon Coolant Screw w/ O-Ring Standard

Part Number	Description	Hole	O-Ring	Thread	Length	Wrench
ASC-16-40	MC20, 25, 32, 075, 100 & 125 Nylon Coolant	2.50	11mm OD x 2.0mm	M16 x 2.00	40	2.5mm & 5.0mm Hex
ASC-12-30	BT30 - MC20 & MC075 Nylon Coolant	2.50	10mm OD x 1.5mm	M12 x 1.75	30	2.5mm & 5.0mm Hex
ASC-16-18	HSK - MC20, 25, 32, 075, 100 & 125 Nylon Coolant	2.50	11mm OD x 2.0mm	M16 x 2.00	18	2.5mm & 5.0mm Hex

True Dynamic Balance

PIONEER ER holder bodies and collet nuts are individually dynamically balanced, not in sets, for maximum flexibility and balance compensation.

Dynamic Balance Compensation

Sealed or Jet-Blast Coolant Cap

Seal Collets or ER Coolant Caps provide a coolant seal up to 1,500 PSI. Coolant Caps prevent chips & debris from entering the collet and chuck. Available in a Jet-Blast model for directional coolant into the cutter flutes.

Performance ER System

Clamping Range : 0.020" - 1.000"

- * Holders Ground 0.0001" TIR or Less
- * All Holders Dynamically Balanced,
Nuts also Dynamically Balanced Individually,
not Paired to the Holder
- * Coolant Thru with Coolant Collets Available
or Coolant Cap System
- * Collet Options down to 2 Micron TIR Guaranteed!
- * Holders Meet & Exceed all DIN Standards
- * ID Chip Hole Standard

Mini Holders for Tight Applications

ER Mini holders are designed to provide additional clearance for close wall applications.

Available in ER11M & ER16M in CAT40 & BT30.
ER08M, ER11M, ER16M & ER20M in Straight Extensions.

Standard Features

Dynamic Balance Compensation

ID Chip Hole

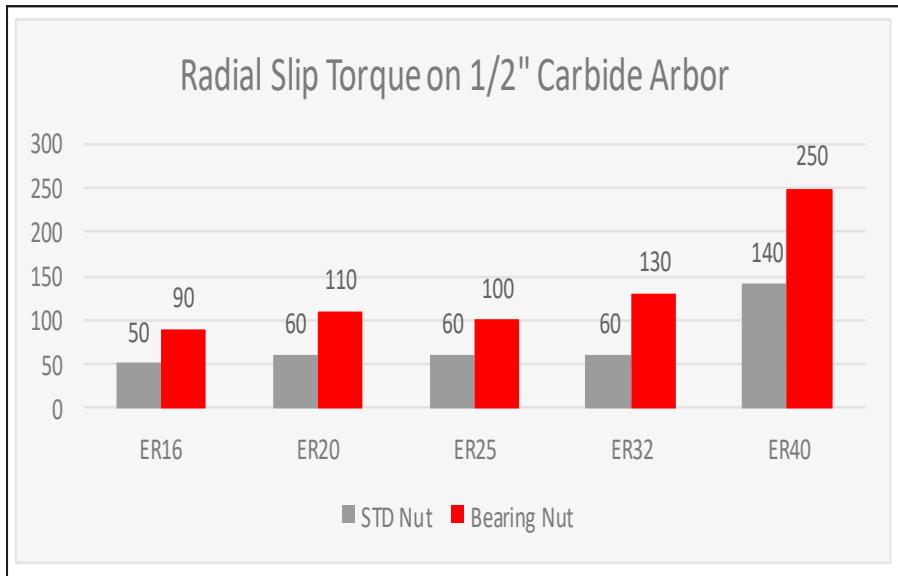

High Performance Bearing Nuts

**Double your grip force
without increasing your locking pressure.**

Bearing transfers torque more efficiently with ER collets allowing higher grip forces without increasing locking torque.

For best performance use ER collets with our bearing nuts!

ER32 standard nut locked at 100 ft/lbs using a 1/2" carbide test arbor, the arbor slips at 60 ft/lbs of radial torque, using a Pioneer Bearing Nut the arbor slipped at 130 ft/lbs of radial torque. The average improvement on ER16 thru ER40 was 75% to 125% increase in radial holding power.

Note: Cutter size, material and finish may effect results. Recommend on-size collets when available.

CAT40 ER32 Stub Collet Chucks

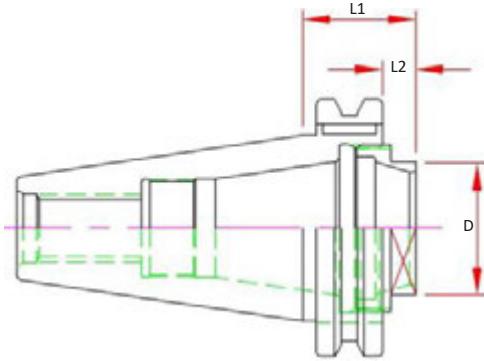

Features

- 3 μm - 0.0001" Runout Taper to Taper
- Coolant Thru Body
- Dynamically Pre-Balanced G6.3 @ 20,000 RPM or <1gmm
- Tapers are ground better than AT3 for optimal T.I.R.

Optional (Order Separately):

- Wrench
- Torque Wrench
- Collets
 - 0.010mm (0.0004") Standard
 - 0.005mm (0.0002") Ultra Precision
 - Sealed
 - Jet-Blast
- Fine Trim Balance (Sample cutter required for balance compensation)

Precision Sync ER Tapping System

Reduce Tap Wear and Extend your Tap Life

- Compensates for synchronization errors in the tap cycle
- Minimal length compensation in both Tension and Compression compensates for small pitch differences between the spindle and tap reducing friction on the tap flanks
- Increases tap life at least 30%
- For tapping speeds up to 15,000 RPM's
- For use in Left or Right hand applications
- Coolant Thru, for use up to 1,500 PSI
- Compact Design with Modular Shank options to fit many machine spindles

Coolant Thru Tapping with Precision Sync

The holder is designed for coolant thru the center. To see the tap shank use a coolant cap matching the tap shank size to create the seal.

Required (each sold separately)

- Holder
- Coolant Cap Nut (page 28)
- Coolant Cap (page 28-29)
- Tap Collet (page 26-27)

Please note the coolant tap shank must be long enough for the coolant deal to make contact on the full round diameter, tap flutes cannot enter the cap.

Precision Sync Tapping ER Straight Shank

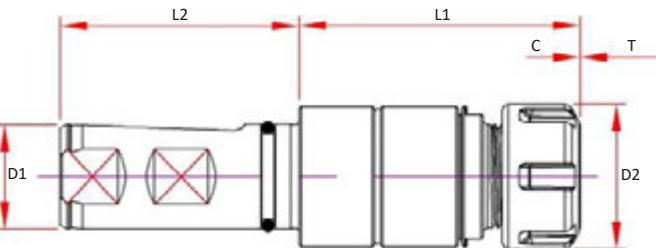

Features

- Coolant Thru, for use up to 1,500 PSI
- Compensates for synchronization errors in the tap cycle
- Minimal length compensation in both Tension and Compression compensates for small pitch differences between the spindle and tap reducing friction on the tap flanks

Optional (Order Separately):

- Wrench
- Torque Wrench
- Collets

Part Number	Collet Type	D1	D2	L1	L2	C	T	Wrench

Modular Taper Assembly

Features

- Coolant Thru, for use up to 1,500 PSI
DIN B flange coolant available in some models
- For Total Projection:
Add "L" from chart below with "L1" from chart above
- Longer projections available see EM section of the catalog

Optional (Order Separately):

- Wrench
- Torque Wrench
- Collets

ER Collets

Optimize your work in many ways:

Pioneer has updated our collet offering to meet the high demands of precision cutting tools and high performance applications.

ER collets are now offered in standard, sealed by design and tap collets.

- Pioneer standard collets come in General Purpose and new Stainless Steel Ultra Precision. The stainless steel collets are made from 420 Stainless and hardened to Rc45.
- Pioneer Sealed collets are sealed by alternating slots. The cutting tool shank must make full contact with the collet bore to create a seal. This design allows for the highest coolant pressures without damage to the collet.
- Pioneer Tap Collets are available in ANSI and DIN configurations with a square punched into the ID for positive drive.

Stainless Steel Precision Collets

Pioneer Stainless Steel Collets are only available in a 5 micron (0.0002") TIR @ 3D.

The picture to the right is a standard ER collet and a Stainless Steel Collet that were submerged in Chicago tap water for 3 months. The stainless collet showed no corrosion anywhere compared to the standard collet.

420 Stainless is a 12% Chromium high carbon material which provides high hardenability and superior corrosion resistance. 420 Stainless allows us to harden the collets to Rc45, similar hardness as most standard ER collets in the market today.

Available in ER11-ER32 in select sizes.

Collet Nuts

Pioneer replacement ER nuts exceed industry standard for fit, finish and balance.

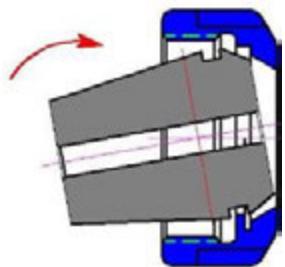

ER nuts are in 4 styles, Mini, Hex, E Type & RD Type.

- **Hex Nuts** are standard for ER11, ER16 & ER20. Smaller diameter than E-Type with standard chuck threads. Hex nuts are machined with an eccentric for easy collet installation and removal.
- **E-Type** or castle type use the 4 prong wrench or spanner wrench, standard on ER25, ER32 & ER40. E-Type nuts are machined with an eccentric for easy collet installation and removal.
- **-EXT** are external threaded nuts for stub length holders. Due to the constraints of the design collets must be “snapped” into the nut. Tap and Sealed Collets are difficult to install and remove.
- **Mini nuts** are designed for reduced threaded Mini Chucks. Mini nuts use a special E type wrench. Mini’s are not interchangeable with Hex or E-Type. Mini nuts are a compression type nut, must be pressed onto the collet for the nut to extract the collet from the chuck.

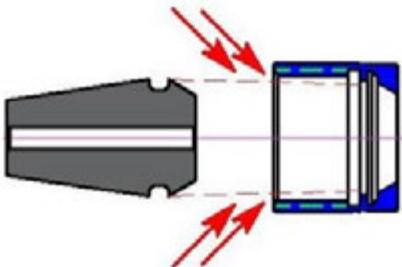

Note: Mini Nuts do not function well with some sealed and tap collets due to the limited space to tip the collet for removal. Some small ID, tap and sealed collets are difficult to compress causing issues in installation and removal.

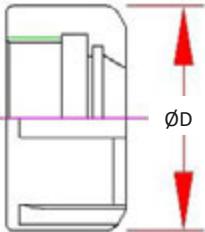

Collet Retainer Type

Hex, E-Type & RD
Eccentric Design

Mini Compression Design

Note: ER Nuts are built to DIN standards. Per DIN tolerances the collet may or many not be retained by an eccentric style nut. If the collet is not retained into an eccentric style nut are not defective but a result of the DIN tolerances.

Jet-Blast SSER Coolant ER Collets

Features:

- High Pressure Coolant - 1,500 PSI
- Standard .0004" T.I.R.
- Designed for h6 Tool Shanks
- Add J to any SSER collet part number

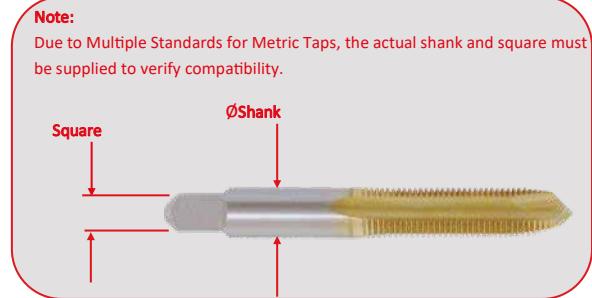

Coolant thru standard collet slots create a loss in pressure and flow control, allowing coolant to fly everywhere. The **Jet-Blast** option for SSER forces the coolant into the **Jet-Blast Ports** maintaining pressure and directing the coolant down the flutes of the cutting tool.

ER Rigid Tap Collets - ANSI

Features

Special design locks tap flats into the collet slots preventing the tap from spinning inside the collet.

- ANSI Shank and Square Standard

ER Coolant Cap Collet Nuts

Features

- For coolant pressures up to 1,500 PSI.
- Fits standard ER collet chucks.
- Jet-Blast Caps Available Upon Request
- Uses SX Coolant Caps below and on the following page.
- Designed for use with standard ER collets

Nut Part Number	Description	Nut Diameter	Coolant Cap	Wrench Part Number	Thread	Max. Torque
ERN11-CC	ER 11 Nut - Hex	0.787 / 20mm	SXC06	ERW-11H	M14 x 0.75	18 ft/lbs Max

ER Coolant Caps - Inch

Features

- O-ring seal for pressures up to 1500 PSI
- Prevents chips, dust & swarf from entering the holder
- Seal range +0 / -.50mm (+0 / -.020")
- Requires Coolant Cap Nut (See Previous Page)
- Jet Slot Available, Order by adding a "J" to the end of the Cap part number

w/ Jet-Blast Option

Building the Best EM in the Industry!

- 3 μm - 0.0001" Bore Runout Standard
- H5 Bore Tolerance Standard
- Coolant Thru Center Standard
- Dynamically Balanced Body for use @ 20,000 RPM's (CAT50 @ 15,000)
- Tapers are ground better than AT3 for optimal T.I.R.
- ID Chip Hole Standard
- Jet-Blast available on all projections

Standard Features

Dynamic Balance Compensation

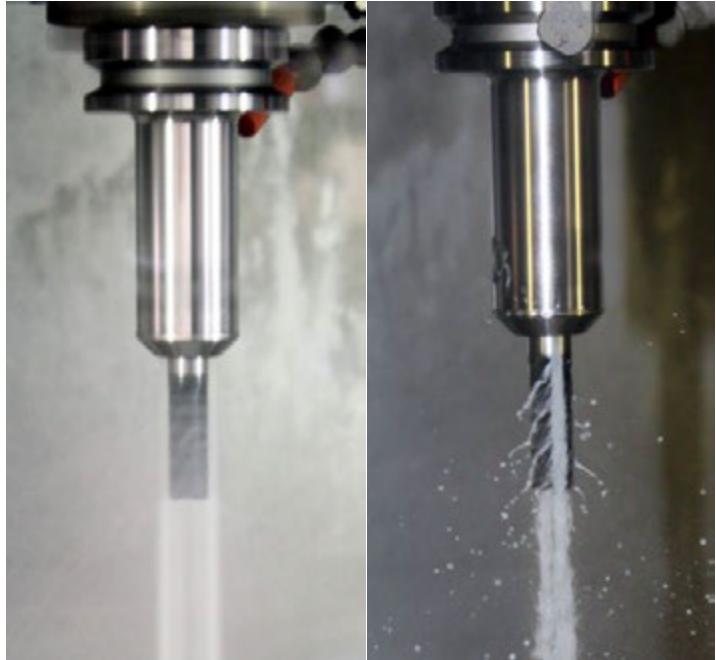

Jet-Blast Coolant Option

Jet-Blast Coolant Ports allow coolant to go around solid cutting tools and deliver coolant at the top of the cutting flutes.

The coolant ports are EDM beside the bore of the end mill holder intersecting the relief behind the ground bore. Coolant is fed from the center or from DIN-B Flange Coolant into the relief and around the cutting tool.

Jet-Blast is available in all holders with a 10" projection or shorter. Longer projections are a factory build and available upon request.

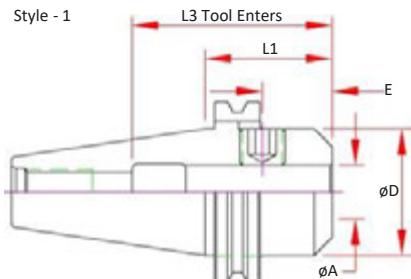

CAT40 & CAT40 End Mill Adapters

Features

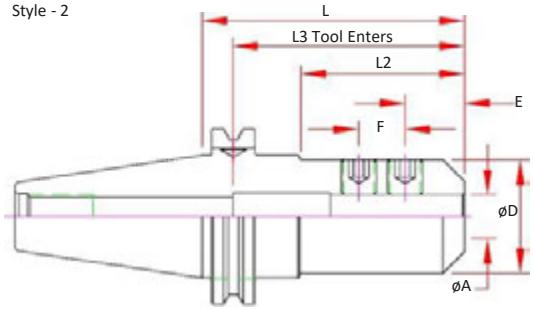

- 3 μm - 0.0001" Bore Runout
- H5 Bore Tolerance or better
- Tapers are ground better than AT3 for optimal T.I.R.
- Coolant Thru
- Pre-Balanced for use @ 20,000 RPM

Style - 1

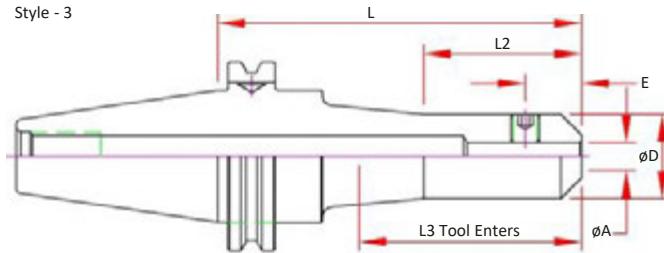

- Jet-Blast (add "J" to the part number)
- DIN-B Coolant (Select models)

Style - 2

CAT End Mill Adapters—Metric

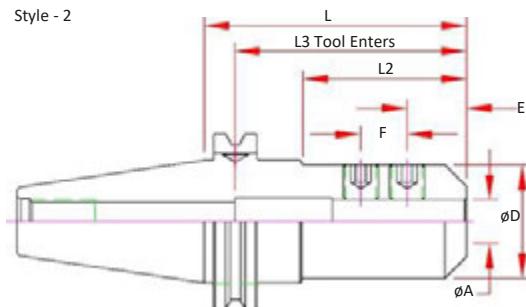

Features

- 3 μm - 0.0001" Bore Runout
- H5 Bore Tolerance or better
- Tapers are ground better than AT3 for optimal T.I.R.
- Coolant Thru
- Pre-Balanced for use @ 20,000 RPM (CAT50 @ 15,000 RPM)

Optional (Order Separately):

- Jet-Blast (add "J" to the part number)
- DIN-B Coolant (Select models)

Shown body mounted with Shell Mill and Inserts not included.

Shell Mill with more standard features!

- Body - Prepped for Coolant Thru, FX or Coolant Screw Req'd
- Body Dynamically Balanced
- ID Chip Hole Standard
- Standard & Extended Lengths up to 15"
- Replaceable Keys

Optional

- FX High Volume Coolant System for Ported Cutter Bodies

Standard Features

Dynamic Balance Compensation

FX - High Volume Coolant System

Shown body mounted with Shell Mill and Inserts not included.

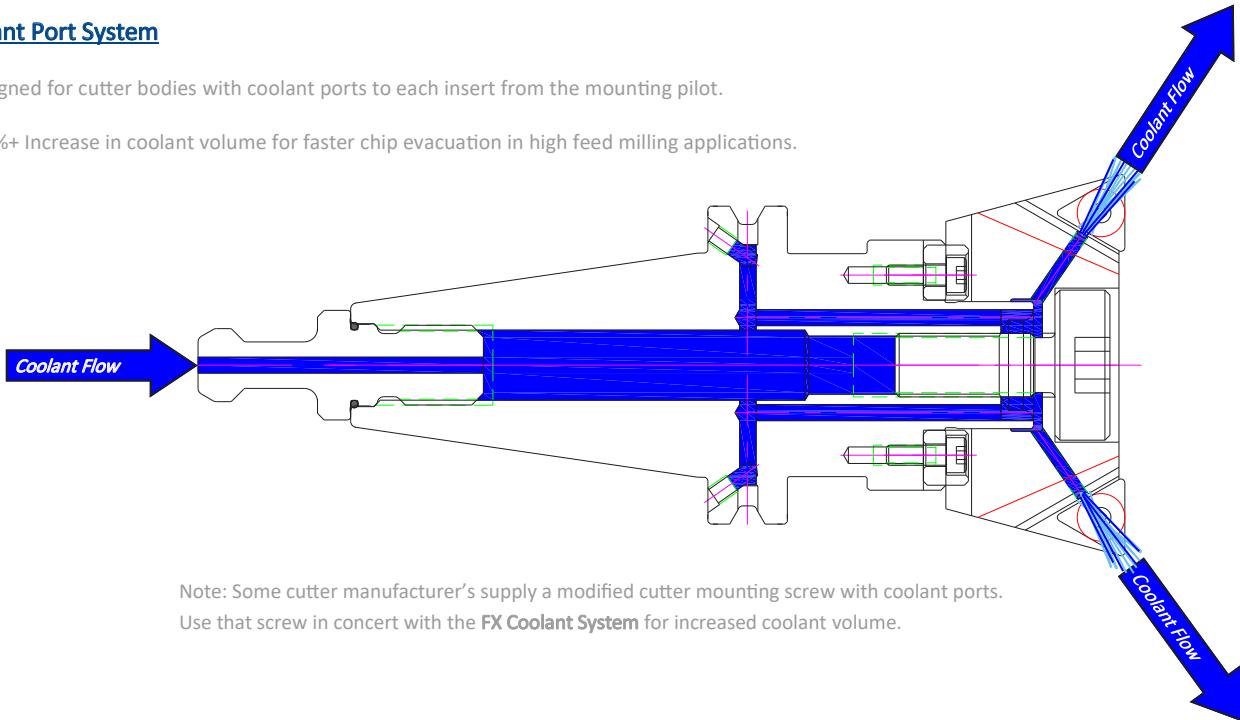

Did your cutter company supply a coolant screw?

Use our standard holder for coolant through the modified screw - or - use our FX model for additional coolant flow!

The standard model is designed for non-coolant and coolant screw applications. For ported cutters, coolant holes to the insert from the pilot of the holder, the FX model is required.

FX Coolant Port System

- Designed for cutter bodies with coolant ports to each insert from the mounting pilot.
- 400%+ Increase in coolant volume for faster chip evacuation in high feed milling applications.

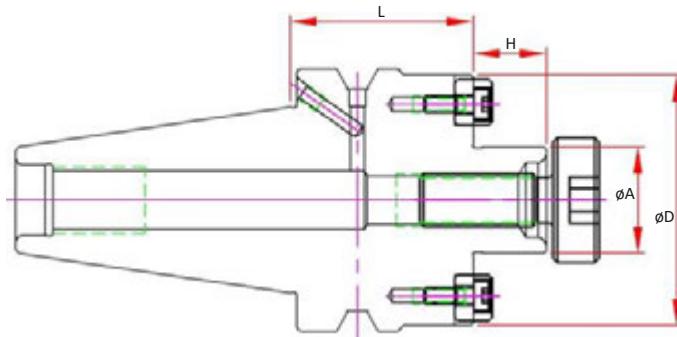

Note: Some cutter manufacturer's supply a modified cutter mounting screw with coolant ports. Use that screw in concert with the **FX Coolant System** for increased coolant volume.

BT30 & BT30 Shell Mill Adapters

Features

- 3 μm - 0.0001" Bore Runout
- H5 Bore Tolerance or better
- Tapers are ground better than AT3 for optimal T.I.R.
- Coolant Thru Body
- Pre-Balanced for use @ 20,000 RPM

Optional (Order Separately):

- FX Coolant (add "F" to the part number)

Pioneer Quick Change Tapping Options

Pioneer offers Rigid, Length Compensating and Tap ER for fully Synchronized tapping applications. Our adapters are manufactured by the company who invented the system so there is never a compatibility problem.

What holder should I use?

In CNC applications where the hole is being drilled in the same setup, it comes down to the machine tool to determine which holder is best for you.

Rigid Tapping

When rigid tapping in a fully synchronized system ER Tap collets provide zero movement with no axial play. While Quick Change RT & RA are called “rigid” they still have some movement in the Quick Change connection which can cause some issues.

RT holders do have a hole thru the center for coolant, it is not sealed but works well with the appropriate adapter. Most RA adapters allow coolant to the back of the tap , the exception is some of the pipe adapters have a stop plug that needs to be modified. This is not a sealed system but fluid dynamics apply, if the outlet coolant hole is larger than the inlet coolant hole there is no issue. Leakage occurs when the outlet coolant hole is smaller than the inlet causing back pressure. This back pressure will leak out of the mechanism.

Roll Form

It is recommended to use ER Tap Collets for Roll Form Tapping. Quick change does not perform well with Roll Form applications.

Length Compensating

In applications where there is backlash in the machine or timing to pitch issues, Tension and Compression holders will compensate to allow the tap to cut freely without pressure from the machine tool.

Programming should be 95-98% of Pitch of in-feed, 100% of Pitch on reverse. This will allow the tap to pull out on the springs of the holder while tapping the hole and spring back when exiting the hole to prevent thread pulling and double cutting.

Rigid Adapters vs Torque Control

Torque control adapters have a user adjustable clutch. The clutch is set for mild steel from the factory. Torque control adapters will clutch if the there is hard spots in the material, the drilled hole is not deep enough or the tap has become dull and is not cutting properly. Due to the sensitivity of the clutch the adapter will clutch before the tap is fully dull.

In CNC machine tools we recommend RA Rigid Adapters with TC Tension and Compression holders due to the drilled hole being controlled by the same setup. However there is always a chance of tap breakage if the tap becomes to dull in a RA Adapter.

RT holders work best in rigid cut tap applications with synchronized speed and feed to match the tap's exact pitch. For roll form taps it is recommended to use TER collets and ER holders.

TC - Tension & Compression Holders

Features

- Tension and Compression Stroke for improved tap life
- Pressure Point Mechanism to increase the cutting pressure and ensure a positive start
- Size 3 includes pull to release system to prevent damage from over stroke
- TC Holders are not designed for Coolant Thru
- For use with both RA and TC adapters
 - TC for machines with limited "Z" control
- 2 Piece Design is assembled Straight Shank Tap Holder with End Mill Adapter
- Tapers are ground better than AT3 for optimal T.I.R.

TC holders are length compensating holders, this allows the tap to start late without causing damage to the tap, holder or machine tool. TC holders are recommended for use with RA adapters unless it is a bottom tapping operation and Z length is not controlled, TC adapters provide a clutch so if the adapter hits bottom the unit will clutch allowing the spindle to continue without damage. Note: There is trial and testing to achieve the proper torque setting on a TC adapter. Adapters come set from the factory for mild steel. Adapter must be set for material hardness and quality of the tap, dull taps require additional pressure to start.

When running TC holders in a machining center it is recommended to set the feed rate 95-98% of the pitch of the tap on in stroke and 100% of pitch on out stroke. This allows the tap to pull out on the holder springs while cutting preventing spindle pressure pushing on the tap. On reverse the tap will "spring" back to help prevent pulled or damage to the first thread.

For roll form taps it is recommended to use TER collets and ER holders.

TB - Test Bar

Features

- Concentric to Taper within $3\mu\text{m}$ (0.0001") TIR
- Tapers are ground better than AT3 for optimal T.I.R.
- Hardened & Normalized for consistency
- 100% Individually inspected with Certification Sheet included
- Wood Box Included
- Laser Marked with Actual Diameter and Length

BT - Retention Knobs

Features

- Manufactured to the Industry Standards or machine builders specifications.
- Grind Finish to adhere to machine builder recommendations
- Coolant Knobs include O-ring on the thread side pilot diameter to adhere to builder recommendations

Note: It is critical that the correct retention knob is used with each machining center.
Please verify all dimensions prior to ordering. Machine specifications will be located in your machine manual or contact the machine manufacturer.

1 O-Ring added to Pilot, adheres to machine company changes, remove O-Ring if not required

Examples of Coolant Thru Retention Knobs

The 7 different styles of coolant knobs shown below the manufacturers listed at JMTBA MAS403 Modified.

Please verify which coolant thru knob you require prior to ordering or spindle damage may occur.

CAT - Retention Knobs

Features

- Manufactured to the Industry Standards or machine builders specifications.
- Grind Finish to adhere to machine builder recommendations
- Coolant Knobs include O-ring on the thread side pilot diameter to adhere to builder recommendations

Note: It is critical that the correct retention knob is used with each machining center.

Please verify all dimensions prior to ordering. Machine specifications will be located in your machine manual or contact the machine manufacturer.

TWS - Retention Knobs Sockets

Features

- Fits HPS Retention Knobs on the previous page
- May not fit other manufacturers designs & styles
- Uses standard torque wrench fractional drive
- **Use Machine Tool Manufacturer's recommended tightening torque**

Part Number	Retention Knob Flats	Torque Wrench Drive	Socket Length	Socket Diameter
TWS-075	0.750	1/2	1.15	1.30
TWS-125	1.250	1/2	1.56	1.93
TWS-118	1.187	1/2	1.56	1.93
TWS-M13	13mm	3/8	1.40	0.98
TWS-M17	17mm	1/2	1.74	1.30
TWS-M19	19mm	1/2	1.74	1.30
TWS-M30	30mm	1/2	2.24	1.97

Retention Knob Tightening Torque

To avoid any warranty and safety issues always use the machine tool manufacturer's specifications.

Traditional locking torque for Retention Knobs are as follows:

- 30 Taper = 36-40 ft/lbs
- 40 Taper = 76-85 ft/lbs
- 50 Taper = 100-110 ft/lbs

Depending on the material, heat treat and wall thickness of the tool holder the above torque specifications can expand the tool holder taper at the small end causing uneven spindle wear and cutting tool runout. Many companies have started using a lighter torque number to reduce or eliminate the expansion. Many machine tool manufacturers do not recommend this lighter system.

Check with your machine tool manufacturer for recommending operational torque.

Torque Wrench

Recommended settings to be 10% below maximum torque to prevent over tightening.

Note: It is recommended to calibrate the wrench to manufacturer's specifications and re-calibrate as recommended. Over torque will cause damage to the tool holder (and collet if applicable).

Part Number	Type	Drive Sq.	Torque Range
TWSQ025	Click & Reversible	1/4 (0.25)	20-200 in/lbs (+/- 4%)
TWSQ037	Click & Reversible	3/8 (0.37)	5-80 ft/lbs (+/-4%)
TWSQ050	Click & Reversible	1/2 (0.50)	30-150 ft/lbs (+/-4%)

HSK Coolant Tubes

- Fits HSK Form A Shanks

Collet Chuck Tightening Torque

Below values are Maximum, do not over torque or damage to the chuck or collet may occur. Calibrate your torque wrench on a regular bases, use wrench manufacturer's speciation.

If any distortion is observed in the collet slots, back off the torque until the collet is restored to normal.

ROTARY WIPER makes it possible to view the production/machining process clearly within the machine enclosure. The window will get dirty from oils, coolants and chips.

By installing ROTARY WIPER, even large amount of coolants, etc., will not prevent an operator from being able to observe set-ups and production runs of all sorts.

- Improved Visible Area
- Less Air Consumption & Lower Noise Level
- Easier Maintenance Work
- Improved Sealing Performance against Coolant (For Tape Fitting Type)
- Special chemically treated glass provides long life from chips and debris
- Low Profile for tight installation areas

Rotary Wiper is available in 2 different mountings, Bolt & Tape. Bolt mountings require 8 mounting screw holes in the windows. Tape on uses a high end adhesive with the only requirement is a clean window.

Type	Mounting	Ø6mm Air Cable (Ø10mm Conduit)
RW-V2-25	Bolt Fitting Type	Ø6mm x 8.2 ft (2.5M)
RW-V2-50	Bolt Fitting Type	Ø6mm x 16.4 ft (5.0M)
RW-V2-T25	Tape Fitting Type	Ø6mm x 8.2 ft (2.5M)
RW-V2-T50	Tape Fitting Type	Ø6mm x 16.4 ft (5.0M)

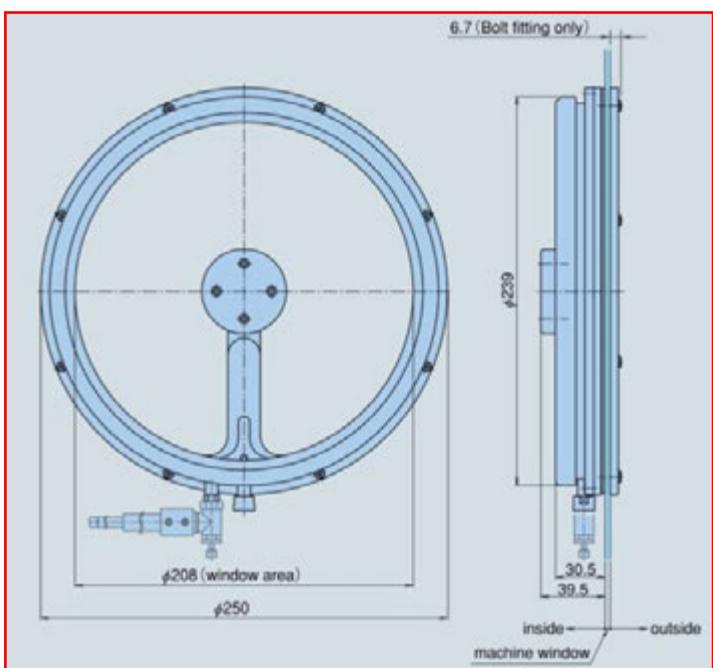

Version 2 Refined Design

This air driven rotary window does not require special wiring like competitive models. Installation could not be more simple:

1. Choose your mount type (Bolt or Tape)
2. Install in machine per provided instructions
3. Run Air Cable to the machine control side air bank
4. Attached Air Cable to your Rotary Wiper

Done!

If RW window was to become damaged, easy removal of the 4 screws from the center hub makes window replacement easy.

Tool Block

PIONEER's Flexible, Indexable Tool Block
with Interchangeable Heads!

The system is designed to prevent injury and allow the operator to move the holder into the best position for manipulation. 8 locking positions (45° apart) with auto lock provides the easiest and safest way of changing cutters and retention knobs. Interchangeable with heads from competitive systems, Tool Block is a must for all tool rooms.

Version 3 includes 1 piece body and 45° positions!

Order Tool Block Head and Base Separately!

Part Number	Description
TB-BASE	(1) Base Required

Base includes Mounting Bolts & Hex Wrench

Note:

PIONEER Tool Block Base will accept competitor's Head Assemblies. Some versions of the competitor's bases will not accept PIONEER Tool Block Heads. An alteration or conversion bolt is required on the competitor's base.

Please contact PIONEER customer service for more information.

Assemble Tool Block Head to Base by rotating the Push Knob on the back of the Base

Optional: Assemble Tool Block Head to the Base by rotating the Push Knob on the back of the Base, Snug tighten with supplied 8mm Wrench

Push in on the Push Knob to unlock the head from the base

Rotate the knob to the desired location, the head will lock in 90 degree increments

The tool holder will snap in automatically.

PIONEER Rotary Tables

PIONEER offers Rotary solutions for todays shop needs.

PIONEER Rotary Tables are best in class performance and are a cost effective solution. Available in 170mm—2000mm with 4th, 5th axis options, PIONEER can help your shop produce at full potential.

4th Axis or Indexer, which meets your needs?

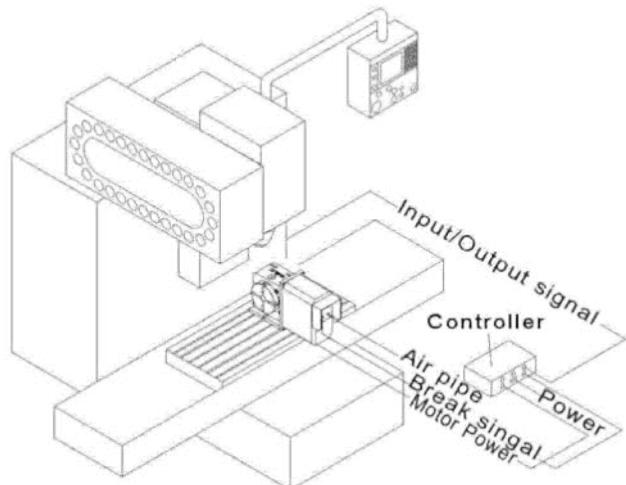

Illustration of an indexer connection

4th Axis

- Fully integrated into the machine control for synchronized operations
- Uses machine control motor for guaranteed compatibility
- Requires professional installation
- Machine must be 4th axis ready

Indexer w/ Control Box

- Uses a control box to connect to the machine control for position / cut operations
- Controlled with M Code for start stop operations or programming with Macro β with compatible machine control
- Can be easily moved from machine to machine
- Can be installed by the customer

Need your table installed?

Looking for something heavy duty?

PIONEER offers a complete line of tables in both standard and heavy duty to meet your application needs.

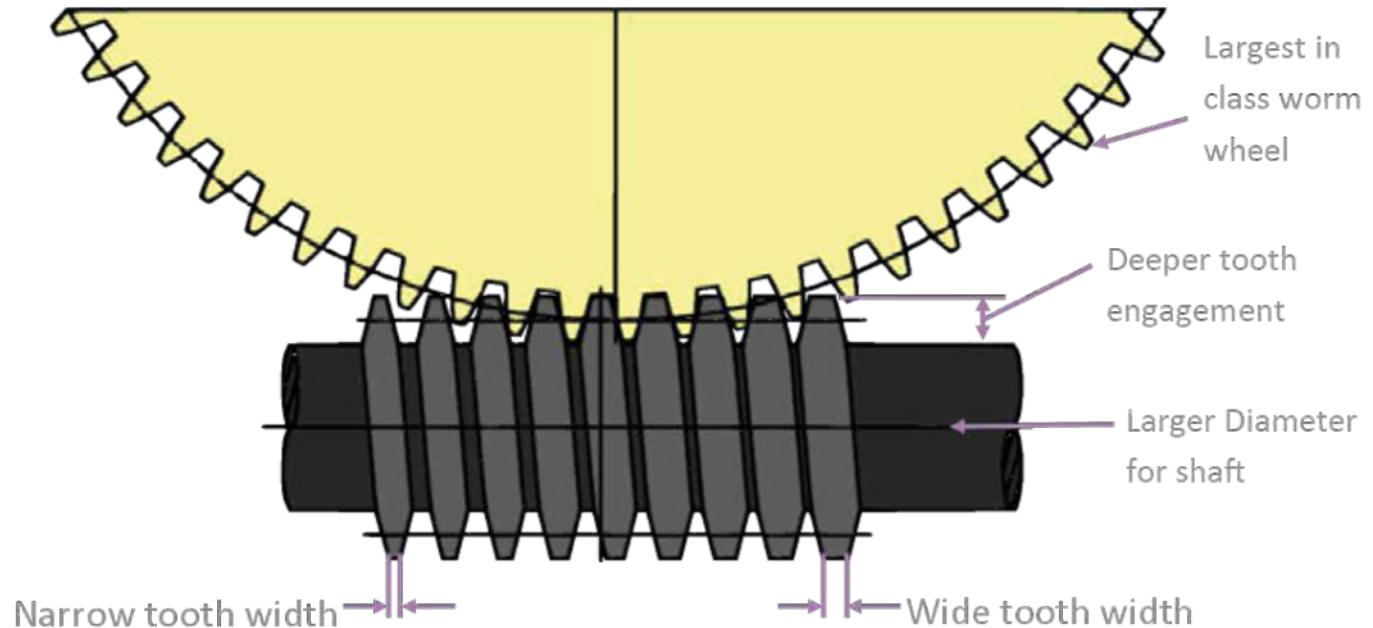

Contact our customer service for more information.

PIONEER put the highest level of technology and engineering together to build the CNC Rotary Tables that have the power to perform.

Durable and Rigid Dual-Lead Gear System

All PIONEER tables use a combination of case hardened special alloy dual-lead screw that has a larger shaft diameter and special high tensile strength brass worm wheel that ensures exceptional wear resistance and long durability for the life of the gear system.

Adjustment of back lash is easy and quick!

PIONEER EDM Rotary Tables

PIONEER EDM tables are fully sealed with positive air pressure and check valve system.

PIONEER EDM Rotary Tables are best in class performance and are a cost effective solution. Available in 140mm—250mm with 4th, 5th axis options, PIONEER can supply an EDM option to meet your needs.

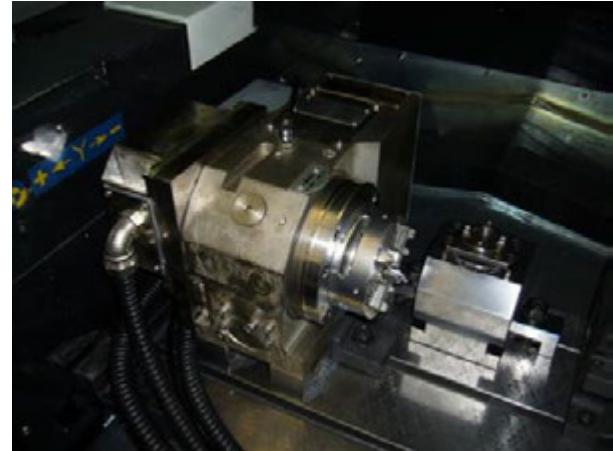

Pioneer EDM Rotary are available in 2 configurations, EDW for Wire, EDS for Sinker machines.

EDW Wire:

- Stainless Steel Faceplate
- Communicator block to ground the face plate
- Nickel plating
- High Performance Seals
- Stainless Steel Screws

EDS Sinker:

- Stainless Steel Faceplate
- Optional Nickel plating
- High Performance Seals
- Stainless Steel Screws

4th Axis or Indexer, which meets your needs?

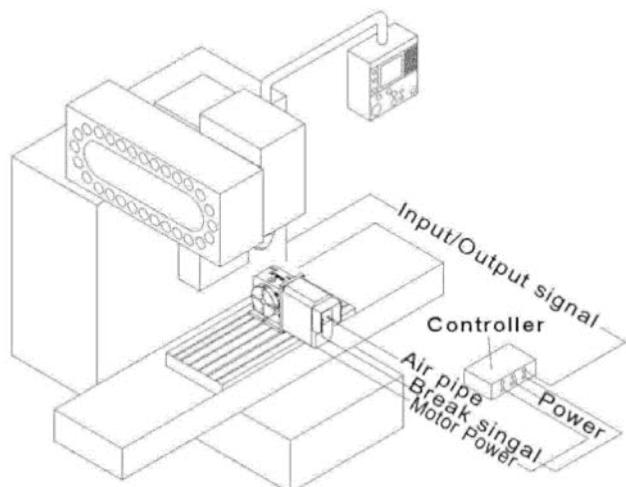

Illustration of an indexer connection

4th Axis

- Fully integrated into the machine control for synchronized operations
- Uses machine control motor for guaranteed compatibility
- Requires professional installation
- Machine must be 4th axis ready

Indexer w/ Control Box

- Uses a control box to connect to the machine control for position / cut operations
- Controlled with M Code for start stop operations or programming with Macro β with compatible machine control
- Can be easily moved from machine to machine
- Can be installed by the customer

JET-BLAST Coolant Options

Jet-Blast has been proven over the last 10 years to double tool life in many applications by blasting the chips out of the cut allowing the cutting tool to cut free increasing efficiency and life.

Jet-Blast is a modification we perform at Pioneer by adding coolant ports to holders in stock. The amount of coolant ports and sizes are dependent on the customer and application. Pioneer will EDM in 2 ports standard, additional ports at a per hole fee.

Jet-Blast can be applied to all tool holders 10" and shorter from inventory, all sealed collets and coolant caps.

Coolant Volume, Pressure and RPM will determine the effectiveness of the Jet-Blast system.

Same tool shot with a High Speed Shutter

Examples

Large or Small, PIONEER Rotary has a cost effective solution for your application

PIONEER brings an Installation and Service department SECOND TO NONE

PIONEER brings an Installation and Service department second to none, with over 20 years experience in full rotary table 4th and 5th Axis installations as well as repair and service on many popular brands.

- Full Turnkey Installations on many Fanuc based controls including Fanuc oi, 16i, 18i, 21i series and more.
- Guaranteed Compatibility - We only install OEM Motors & Controllers to guarantee 100% compatibility with the machine control.

PIONEER EDM

Thanks to excellent water protection by patented auto air purging and optional corrosion protection plating or paint, JNC and TNT models are available as most affordable EDM rotary and indexing solution.

JNC Models

JNC140 / JNC170 / JNC200 / JNC250

- Available in 5.5 / 6.7 / 7.9 / 9.8 inch table diameter
- Submersible with standard Auto Air Purging System (PAT)
- Optional stainless face plate with commutator block
- Optional nickel plating for better corrosion protection

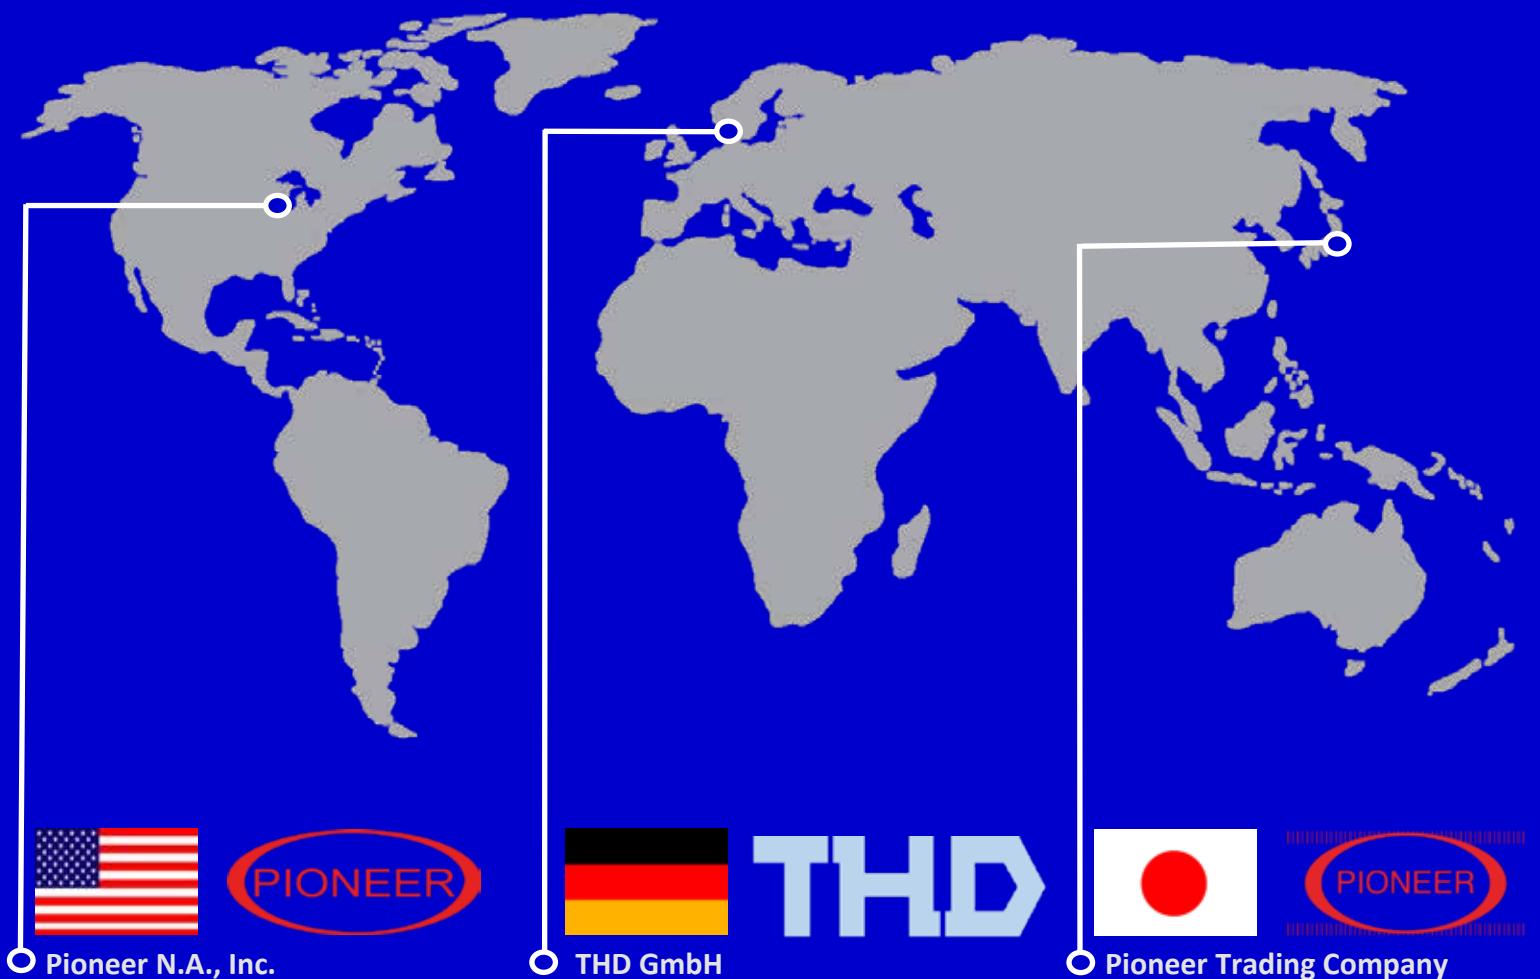

TNT models

TNT100 / TNT170

- Available in 3.9 / 6.7 inch table diameter
- Submersible with standard Auto Air Purging System (PAT)
- Optional stainless face plate with commutator block
- Optional rust preventative paint for better corrosion protection
